Office hours: Normally Wednesdays 1.30-3 (Sage 38).  
Sign up: https://goo.gl/X7vFOD

Teaching Fellow  
Anne Frances Durfee

Schedule and Location  
Kroon 321, Mon/Wed 4:00 – 5:20pm  
This is a 1.5 credit, 6-week course: Aug 30 through Oct 11

Course Description and Goals  
Transportation is the fastest-growing contributor to greenhouse gas emissions, worldwide, but has often been considered the most challenging sector to decarbonize. In this course, we will critically analyze a range of policies to improve fuel economy, promote electric vehicles, and reduce vehicle travel. We'll briefly consider the range of infrastructure and policy changes that can reduce greenhouse gas emissions from transportation. But we’ll spend more time on the question of how these changes can be implemented, and the tradeoffs between emission reductions, equity, safety, and other policy goals. The course has a US focus, but we’ll bring in examples from other contexts from time to time.

After completing this course, you should be able to:

• Identify and critically analyze ways in which policymakers and planners can reduce greenhouse gas emissions from transportation  
• Critically analyze how racial and other societal injustices are affected by the design of environmental and transportation policies  
• Understand the policy frameworks for mitigating transportation emissions, at scales from local to global

Class Participation  
Class sessions will usually include a mixture of lecture and discussion, and your active participation is essential to making this course successful and enjoyable.

To help seed the discussion, all students should use Perusall (a tool that is integrated with Canvas) to annotate 1-3 brief discussion questions and/or comments on the readings for that class. These are due by 11.30am the day of class. Your annotations might include a question that was sparked by one of the readings, a broad comment on or reaction to the
readings, or an example that further illustrates a concept from the readings. These posts have three purposes: (i) encouraging you to engage actively with the readings, (ii) helping us all appreciate different perspectives on the course material; and (iii) helping me shape the structure of each class. Please engage with the comments of others as well as writing your own.

**Graded Assignments**

Detailed instructions and grading criteria will be distributed early in the semester.

<table>
<thead>
<tr>
<th>Assignment</th>
<th>Weight</th>
<th>Due Date</th>

</tr>
</tbody>
</table>

**Case study**

Working in pairs, you will develop a case study of policy development and implementation in a particular city or other place. The aim is to take some of the general, possibly abstract, policies that we discuss in the class, and analyze them in a specific context. For example, how has a particular city planned for vehicle electrification or transportation justice?

This is an oral assignment – there is no written deliverable (except for any slides, if you use them). You will give a 5-minute presentation in class (plus some time for questions). Your presentation should discuss the specific practices, policies or projects that other places can learn from and emulate, and analyze the important lessons learned.

Choose a case study from the approved list, or suggest your own to the instructor. Sign up during the first week of the class for a case study and presentation slot.

**Policy analysis memo**

You will write a memo that critically analyzes a proposed transportation project or planning effort that (at least in part) aims to reduce greenhouse gas emissions. This assignment is partly a research paper, but then applies that research to analyzing a real-world project. For example, you might analyze the research literature on e-bikes as a climate mitigation strategy, and then use those findings as a benchmark to assess a city’s e-bike incentive program.

**Class Participation**

Your participation grade will consider active participation in class, and the quality of your comments and discussions on Perusall. Attendance will not directly count towards your grade – please stay home if you are sick! However, I ask you to commit to attending all the classes that you physically can.
Course Policies

Accessibility and Disabilities
If you require any accommodations because of a disability, please talk to me within the first two weeks of the semester if possible. The sooner that I am aware of any accessibility needs, the quicker I can try and accommodate them.

Late Submission of Assignments
Students can make a formal request to the instructor for special consideration for an extension to an assignment due date. This request should be received at least 48 hours in advance. Otherwise, one partial grade will be deducted for every 24-hour period an assignment is late. For example, an A- will go to a B+.

Academic Integrity
The sources of all ideas, text, pictures, or graphics that are not your (or your team’s) own must be fully cited, all passages copied from other sources must be in quotation marks with the source cited, and you absolutely cannot submit materials that have previously been submitted by other students in previous iterations of this course, even if you have re-worked this material for your submission. Being in this class constitutes an acknowledgment and willingness to abide by Yale’s academic integrity policies.

You are welcome to use ChatGPT or any other generative AI tool. However, you must clearly state the purposes for which you used the tool, and attach the raw output from the tool. You will be graded on your own analysis and interpretation and how it extends beyond and improves upon any contribution from AI.
Course Schedule and Readings

The schedule is preliminary and subject to change, depending on how quickly or slowly we move through the material, which is not always easy to predict. While not required, please try and skim some of the optional readings, which provide more extensive context, analytical tools, or different perspectives.

For most of the readings, I provide guiding questions on Canvas. I realize that it’s not always clear why I am assigning a particular reading, nor what I want you to focus on or get out of it. The guiding questions are not intended to be exhaustive, but rather to help you in the reading process.

Introduction (2 classes)

We will review the history of how policy makers have responded to transportation’s environmental impacts, and consider how climate change mitigation policies in the sector have been conceptualized and framed. In particular, we’ll consider why transportation has been considered a “hard” sector to decarbonize, and the relative balance of policies to reduce vehicle travel, improve vehicle efficiency, and switch to lower-carbon fuels.

Required Readings: Class 2

Optional Readings

**Efficient and electric vehicles (4 classes)**

Electrification has emerged in the last few years as the dominant way to move towards more efficient, lower-carbon vehicles. But the road was long, with numerous false starts, and competing technologies such as hydrogen fuel cells and biofuels. We’ll discuss the evolution of regulatory mandates and incentives, current barriers to electric vehicle adoption, and the downsides in terms of inequity, increased vehicle weight and locking in car dependence.

**Required Readings: Class 3**

IPCC WG3 Ch 10, Sections 10.3 and 10.4

[Read the Executive Summary]

**Required Readings: Class 4**

**Required Readings: Class 5**

**Required Readings: Class 6**

**Optional Readings**

**Reducing vehicle travel (4 classes)**

Should policy makers aim to reduce the amount that people drive? And if so, how? We'll begin by examining the impacts of road infrastructure, and then consider the roles of land use planning, public transportation, and non-motorized transportation. A common theme will be the extent to which such policies are being and should be driven by climate policy, rather than the economic, safety, and local air pollution co-benefits.

**Required Readings: Class 7**

[Note: there are many readings here, but all are short]

IPCC WG3 Ch 10, Section 10.2

**Required Readings: Class 8**
https://transfersmagazine.org/magazine-article/issue-5/the-30-minute-city/

California Air Resources Board. 2023. *2022 Progress Report. California’s Sustainable Communities and Climate Protection Act.*
https://ww2.arb.ca.gov/sites/default/files/2023-05/2022-SB150-MainReport-FINAL-ADA.pdf [Read the Executive Summary]

**Required Readings: Class 9**

McGraw, Jen; Haas, Peter; Ewing, Reid; and Sabouri, Sadegh. 2021. *An Update on Public Transportation’s Impacts on Greenhouse Gas Emissions.* TCRP Synthesis Report. [Read the Executive Summary]

https://www.itdp.org/library/standards-and-guides/the-bus-rapid-transit-standard/

**Required Readings: Class 10**

Butler, Tami. 2020. Why We Must Talk About Race When We Talk About Bikes. *Bicycling.*
https://www.bicycling.com/culture/a32783551/cycling-talk-fight-racism/

**Optional Readings**

**Policy frameworks (2 classes)**
In the final part of the course, we’ll consider how transportation is considered in global climate and energy models, and in international climate negotiations. We’ll discuss the global policy framework, particularly in terms of individual countries’ proposals under the Paris Agreement.

**Required Readings: Class 11**
IPCC WG3 Ch. 10, Sections 10.7 and 10.8

Required Readings: Class 12

Kustar, Anna; Ben Welle; and Thet Hein Tun. 2022. *Sustainable Urban Mobility in the NDCs: The Essential Role of Public Transport*. World Resources Institute. 

Optional Readings
